

OBJECT ORIENTED WEB PROGRAMMING USING RUBY

Day 5: 11/May/2017

System Design Review

Find latest slides from...

<https://github.com/webdbhosei/ScopsOwl>

Now our lecture materials had been moved
to github.com

Today's Topics

First, make a fork of the project master, then, becomes the contributors of this project.

Then, generate your “portal” view(.html.erb) that identifying yourself.

Make your portal's nickname

Peter: chat example page, ?

Mitsu: Dropbox part, ?

Taka: Educational Portal views, ?

Hit: Bus Delay views, ?

Hokt: Educational Document finder view, ?

➔ then, make it your view's application name.

Generate or write simplest page

Generate views of your own entry

(I will write a entry links in the welcome screen, to your portals.)

Then, submit “PULL REQUEST” to the project owner.

(I will update the link paths in the welcome page, to check the link action.)

Rspec Introduction

Now we will share the same source code from webdbhosei's ScopsOwl repository.

Check the Rspec current condition.

When you corrupted your local,

Git force pull to overwrite local files

<https://gist.github.com/vladimirtsyupko/10964772>

Confirm it runs

You submit “pull request,”
(then, I will merge your updates, update the
project status as soon as possible,)

When I merged and the project would be
updated, then you “git pull” locally, to
update the project.

Confirm you can show the website with rails
command: **rails server**

Nextweek: design walkthrough

Your second presentation on the “sub-project” you had become assigned,

Show the “mock” view pages, and explain the functions of the page.
